

Justin L Mead is the principal of Rocky Mountain Managed Information (RMMi). The primary skill focus; requirements, integration, project management, within industries of oil and gas - health care - finance - inventory management - retail - government (local and federal).

Secondary areas of expertise; marketing, creative solutioning, coaching and or mentoring in the modalities of interest.

Projects include contracting tasks on analysis, architecture, design, and development. RMMi also has delivered capabilities with ghost writing, logo design, web development and hosting. Past projects have also included technology solutions in; environmental consulting, retail inventory management, business to business sales, real estate list management, laboratory information systems; as well as projects for sole proprietors in public relations, therapy, cartooning, sculpting, photography and personal services.

Large contract efforts include:

- Sr Business / Requirements / Test Analyst Xcel Energy
- Sr Data / Systems Integration Analyst McKesson MHS Team
- Sr Business Analyst / Program Manager McKesson ADM Team
- Requirements Analyst / USDA APHIS VS
- Sr Systems Analyst / Agile McKesson Corporation ADM Team
- Sr Systems Analyst / Project Manager Sprint Nextel Corporation
- Sr Business Analyst McKesson Corporation MMP Team
- Team Lead / Analyst Fair Isaac Corporation

More than two decades of experience in technology. The recent decade was focused on large enterprise projects listed above doing integrations, requirements management, analysis, testing and project architect roles. It all started back in 1994 when with reengineering an Access database to improve sales lead generation tracking for a small business. Initial business start was from sales reporting mindset and moved into application coordination, logistics, web coding with text editors. Moving into more complex business systems analysis such as corporate report analytics, data integration, application development, managing teams, developing documentation all in support of successful projects. The time spent in marketing, sales, and lead generation since 1992, was from the point of view of visual communications.

My training is that of a Business Systems Analyst with a B.S. degree in Business Information Systems from University of Phoenix, 1999. I originally spent two years at Lyndon State College learning Visual Communications and Philosophy.

Previous to my technical focus life, I have graphic design and marketing experience from my early careers serving small office/home office users. Still have the Macintosh Color-Classic computer that got me started exploring what I could do with technology, at the time, in 1993, it was so I could create marketing communication materials for small business, brochures, posters, ad-copy. It had a FileMaker database. That ClarisWorks database tool got me thinking.

Side interests span; cooking, welding, carpentry, HAM Radio, expedition truck projects, motorcycle touring, backcountry adventures and writing. Several novels have been slowly growing over the years between the sci-fi and self-help domains to keep it interesting.

- ~ Bachelor of Science - Information Systems from University of Phoenix, 1999
- ~ Technology roles since 1994
- ~ Sales and Marketing from 1987-1994
- ~ Ski Bum from 1987- 1989
